OndaDomino

Sinuous design inspired by waves

OndaDomino is the **innovative**, exclusive, and patented line of the Domino modular system in metal. With its distinctive open-cell structure, it is designed to offer elegant and versatile solutions.

Perfectly integrated with the Domino system, this new collection offers **endless customization possibilities** to create unique and functional configurations.

With OndaDomino, metal panels can be used for the visible sides and polypropylene panels on the hidden parts, reducing overall weight and optimizing costs.

OndaDomino is the ideal choice for those seeking the perfect balance of aesthetics, functionality, and innovation, transforming any space into a harmonious and balanced environment.

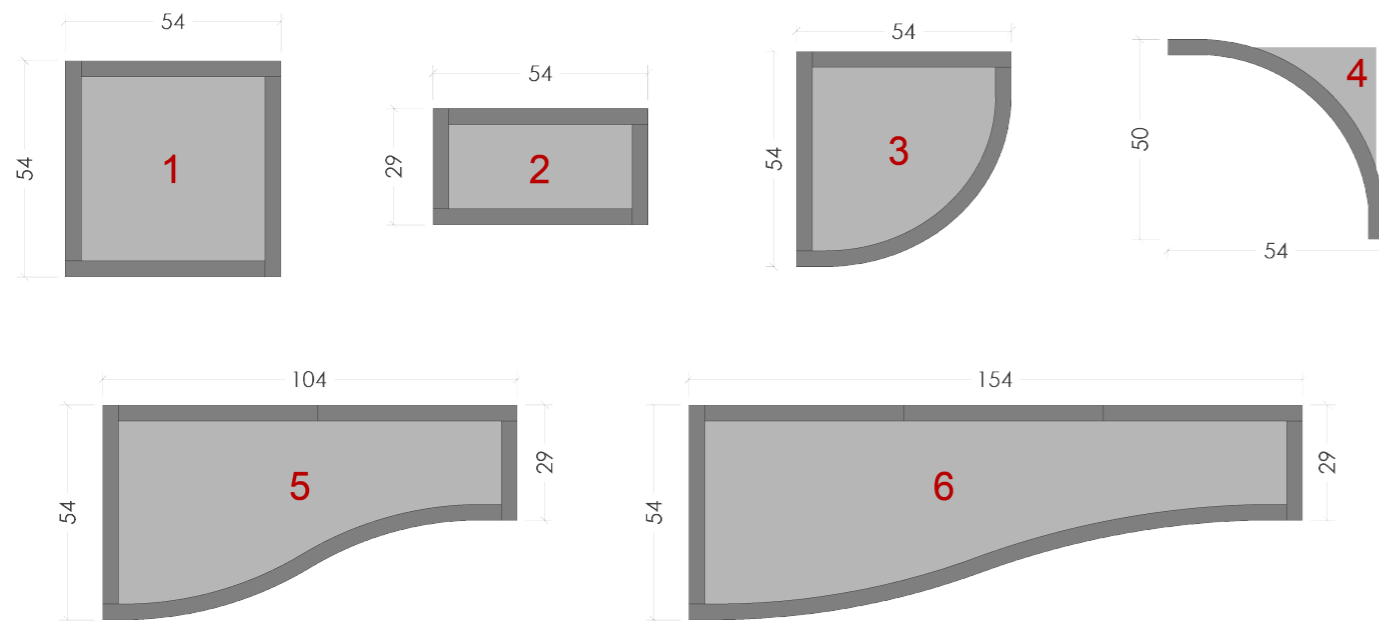

Creating with OndaDomino

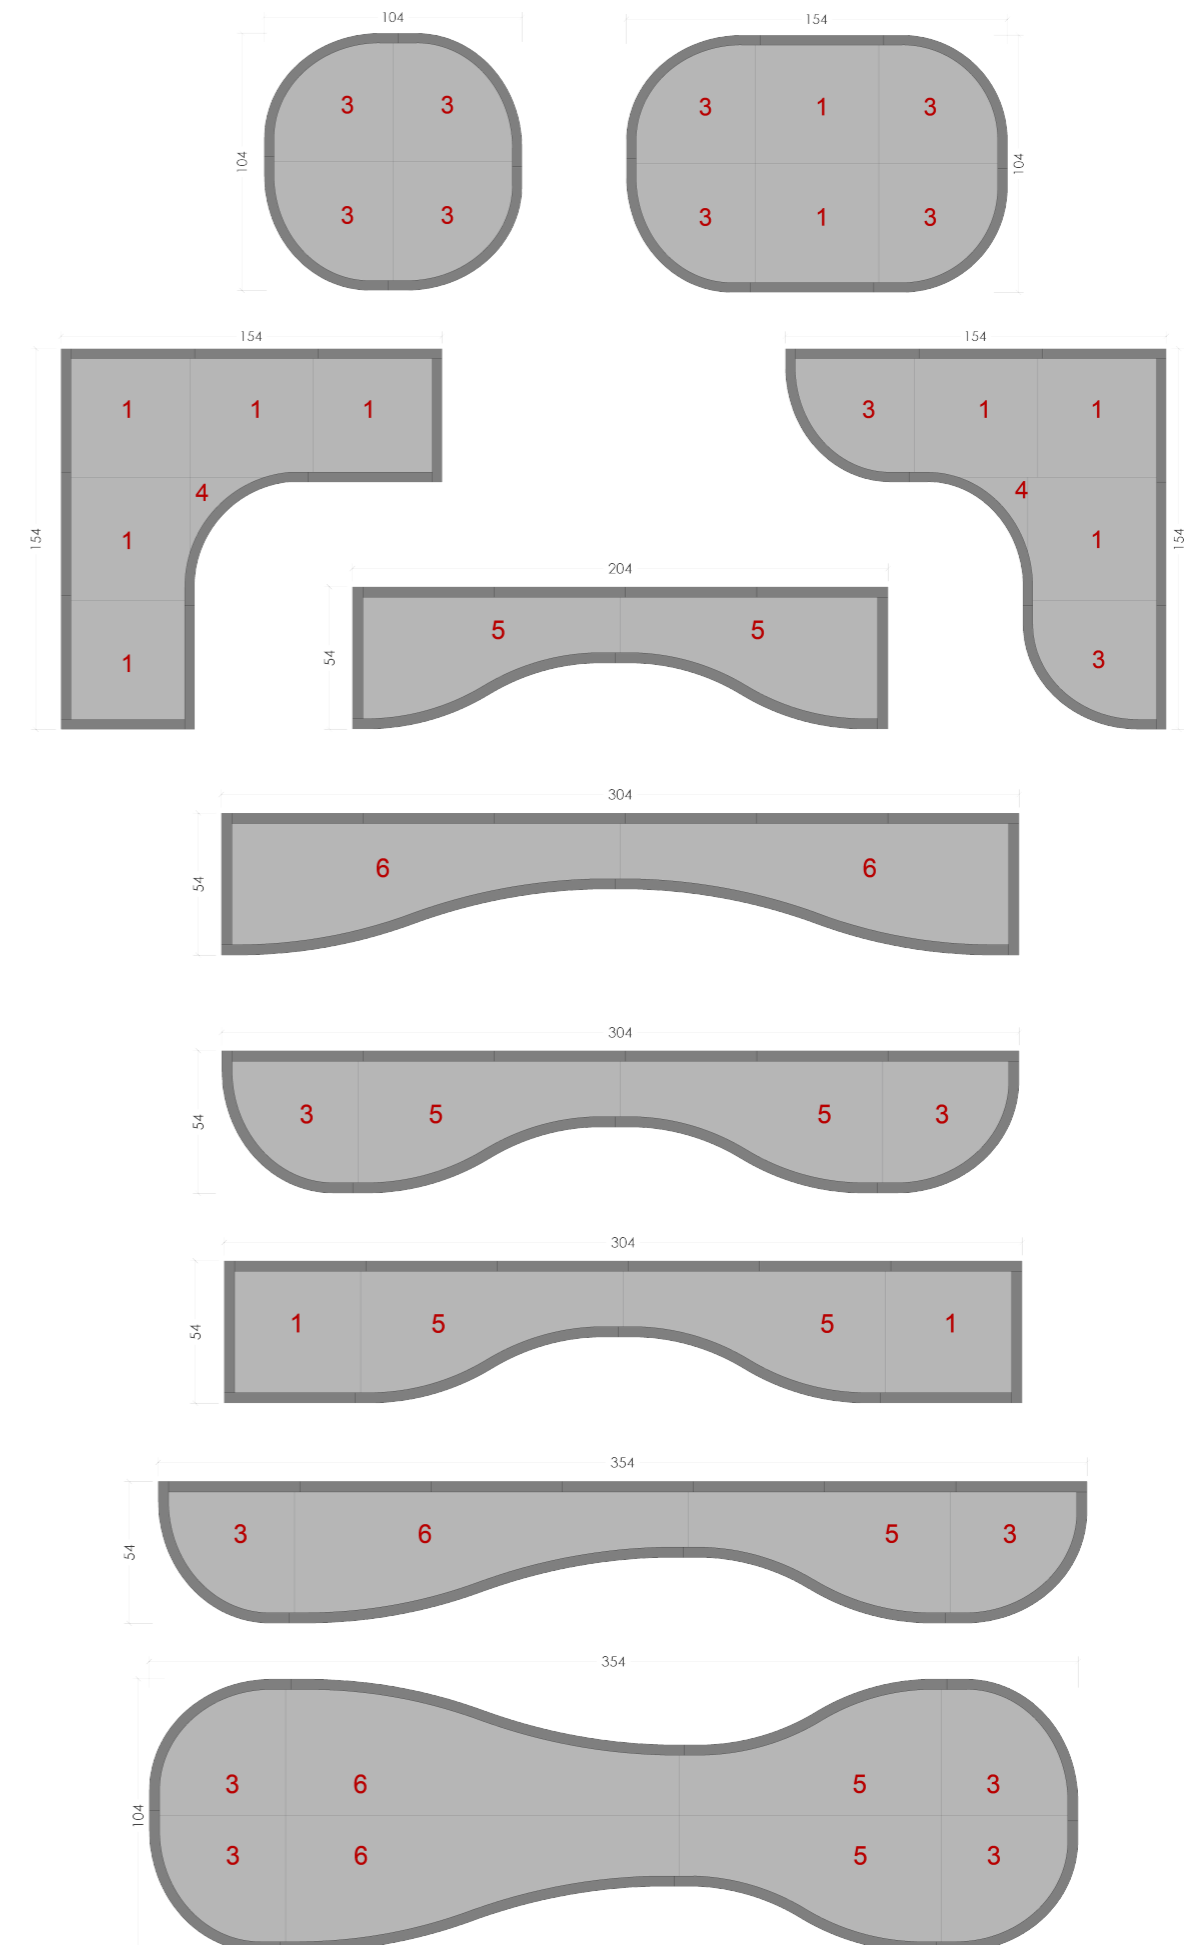

OndaDomino elements can be combined with the traditional Domino line, allowing for **endless configuration possibilities**.

Available in metal in three lengths – 50, 100, and 150 cm – and two heights – 50 and 75 cm – OndaDomino lets you create planters with a fluid design and sinuous lines that blend perfectly into any space.

OndaDomino slabs are made of galvanized metal, powder-coated and oven-baked, and can be **customized** with various colours and finishes. The slabs are fully **insulated** with a 30 mm polystyrene panel, which ensures a complete reduction of solar thermal transmittance.
